

## Washing machine Type 3500

Cleans printing unit press such as ink pans, ink containers, doctor blades and other parts with solvent or with alkaline water-based cleaners. During the washing operation, the parts are sprayed with solvent by spray pipes oscillating around their longitudinal axes. Very good cleaning results due to short spraying distance and a powerful washing pump. High washing capacity due to a large washing chamber and loading from 2 sides. The solvent tank is separated from the washing chamber; hence emissions are considerably reduced. The machine can be adapted to various tasks with the appropriate accessories. The solvent washing machine is type-examined and explosion-proof (category 1/2) in accordance with ATEX.

### Dimension:

Usable width:	2000 mm
Usable height:	500 mm
Usable length:	2000 / 3000 mm

### Items to be washed

### cleaning agents

### cleaning agents
